Notes and Definitions:

Unemployment rate²: 'Number of unemployed persons expressed as a percentage of the labour force.'

Labour force: 'Civilian non-institutional population 15 years of age and over who, during the survey reference week, were employed or unemployed'

Employment: 'Employed persons are those who, during the reference week did any work for pay or profit, or had a job and were absent from work'

Unemployment: 'Unemployed persons are those who, during the reference week, were available for work and were either on temporary layoff, had looked for work in the past four weeks or had a job start within the next four weeks'

Unemployment Rate = (Number of unemployed people)/(number of unemployed people + number of employed people)

Stated otherwise: (number of unemployed people)/(total labour force)

Participation rate: 'Total labour force expressed as a percentage of the population aged 15 years and over.'

Seasonal adjustment: 'Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations'.
